
Asentia LMS - Go Beyond eLearning

Cool Demo 3 - Ryan Lang

What It Is?

Is a next generation online learning system design to create the most convenient and sophisticated user learning experience of any on learning software. It is customizable depending on the user, and the requirement that are needed for the learning platform of the learners, or students as it may be.

How It Works?

The Online software can be downloaded from the company website, and then used as a remote app based on the “owner” or Professor specifications. It can be accessed on Desktop, Laptop via online web applications, and can be accessed on Tablets and Phones from the app in the Google Play Store, Apple Store, or Amazon App Store.

USER EXPERIENCE

Capabilities?

This software offers the ability to customize the user experience to meet the needs of the classroom experience. This os done with a “Widget Based” design that was implemented. Using these widgets allows the software to be able to configure to meet the needs of the lesson plan for each instructor.

Accessing the Software?

This software can be accessed just about anywhere, as long as there is an internet connection. Whether a learner is suing a desktop or laptop, which can access the web application from online, or on a Tablet or Smartphone using the app, it can be accessed, setup, used, or updated.

Assigning Permissions?

This feature allows the creator to build, design and post lesson plans within the software. Once this is created, the user can access, download, and use these uploaded lessons, within the software. The creator can check who can update, change, access using various widgets within the software.

Social Aspect?

Similar to other online learning software there is a “social” aspect to this software built im. SImilar to a discussion boards, or online blog post. There is also features that mimic Facebook or LinkedIn, allowing users to communicate, follow and update their profiles based on learning experience and preferences.

AUTOMATION

Automation?

In the modern world in which we work, automation is huge. And even with professor this is huge, being able to have assignments update automatically, showcase emails, and change rules and permissions based upon learners and their needs.

Creator Lesson Plans?

Creators can make a variety of options when it comes to what is needed based around lesson plans. These can be saved, and used a tb leather times, and dates. There is even an e-commerce section where lesson can be sold, or discounted if there is limited supply and demand.

Conclusion. . .

With almost unlimited design, and creation based on what is needed, there is so much potential. Weather for typically learning or to be sold as single lesson. There is so much in the name of configurability. That is where this software is superior than others that are on the market.
